The introduction of both the 33 $\frac{1}{3}$ rpm, 12-inch LP record and the 45-rpm, 7-inch record, coming into the market in 1948/1949, provided advances in both storage and quality. These records featured vinyl (polyvinyl chloride or polystyrene), replacing the previous shellac materials. Further groups of small labels came into existence with the dawning of the rock and roll era in the early-to-middle 1950s, and the growth of a market among post-war teenagers with disposable income to spend on 45-rpm singles. Rock and roll was much less costly and more profitable to produce than the big band jazz and professional singer/song-craftsman music that it replaced in popularity.
